Learn how to BUILD YOUR BUSINESS with Geothermal & Water Source Heat Pumps

Geothermal and water source heat pumps are the most efficient cooling and heating sources available today - and with the increasing high cost of fossil fuels, they are quickly becoming the HVAC system of choice. Our 1 day factory training will give you the information you need to sell to customers and to specify these exceptionally efficient systems.

Here's what you will learn:

- ✓ How geothermal/water source systems work for both NEW CONSTRUCTION and REPLACEMENTS
- ✓ The difference between CLOSED LOOP and GROUND WATER systems, and which is best under what circumstances
- ✓ What models are designed for RESIDENTIAL use
- ✓ Which units work best for COMMERCIAL use
- ✓ What's available in OPTIONS such as hot water generator, heat exchanger, auxiliary heater
- ✓ How to INSTALL and TROUBLESHOOT a system
- ✓ Basics of LOOP DESIGN and fusion
