Heat Pump Troubleshooting

Description: This seminar is designed for the technician who is expanding his/her education into the heat pump field. The technician will receive an overview of the heat pump's operation fundamentals. Learning this will provide the technician with a greater understanding of the heat pump system and provide a more logical method of diagnostic procedures. Through the use of computer simulation programs, technicians will learn to diagnose common operational and mechanical defects to troubleshoot and diagnose heat pump system problems faster and more accurately.

Course Topics:

- Compressors
- Metering Devices
- Electrical Schematics
- Cooling Mode
- Thermostats
- Temperature/Pressure Charts
- Condensers
- Reversing Valves
- Defrost Circuit
- Supplementary Heat
- Superheat
- Evaporators
- Check Valves
- Heating Mode
- Balance Points
- Subcooling

Cost Per Person: \$70.00 (includes light supper)

Time: 4:00 PM - 8:00 PM

When:	<u>February 10, 2010</u>	<u>February 16, 2010</u>	<u>February 17, 2010</u>	<u>February 18, 2010</u>
