ELECTRICITY FOR HVAC TECHNICIANS

Description: The #1 reported issue for contractors is incorrect or poorly diagnosed electrical problems. This training seminar is designed for technicians in the HVAC field and provides the student with an understanding of the fundamentals of electricity as it applies to basic HVAC equipment operation. The class will explore the operation of different types of electrical equipment utilized in the HVAC systems. Students will also learn how to use fundamental diagnostic tools including a Voltmeter, Ohm Meter and Ammeter as a basis for understanding how to learn troubleshooting and diagnosing electrical problems in HVAC systems.
